# Re-design Proposal

## Version 0.1 (Draft)

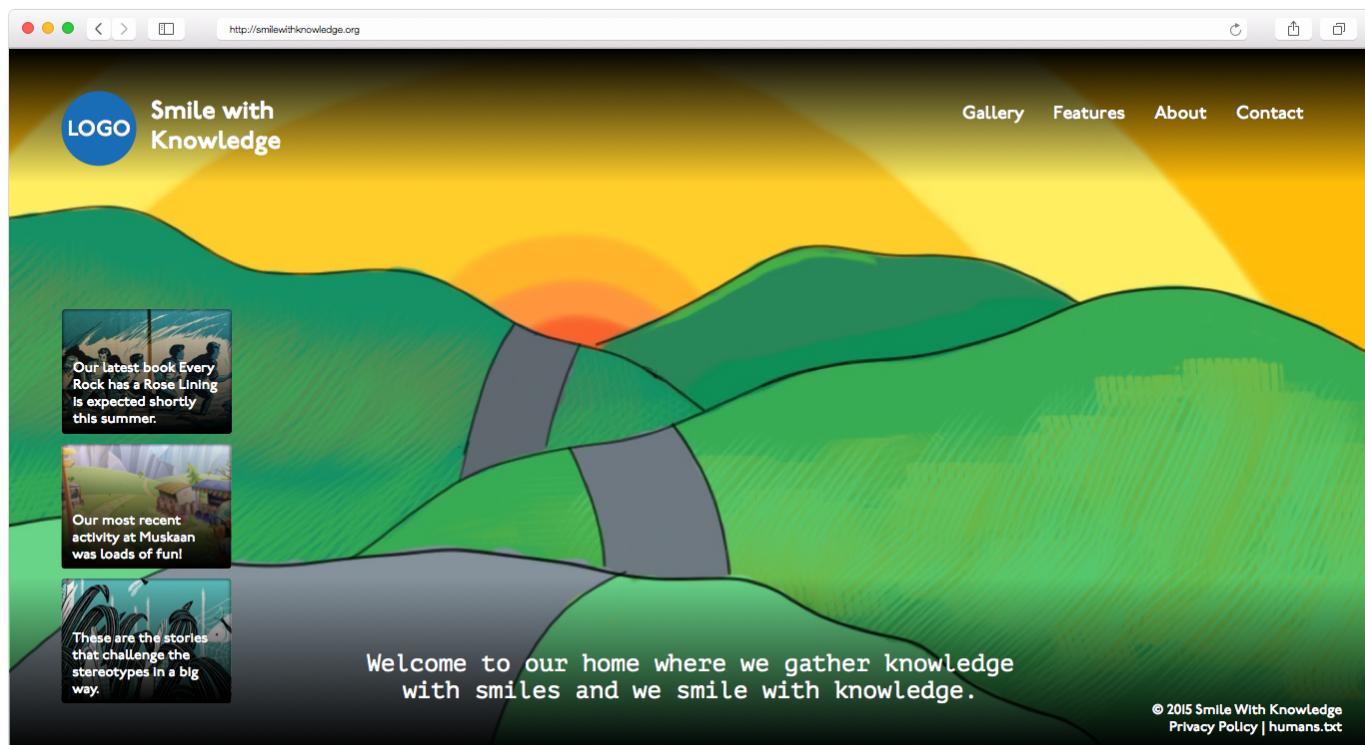

Prepared by  
[prashant@ducic.ac.in](mailto:prashant@ducic.ac.in)

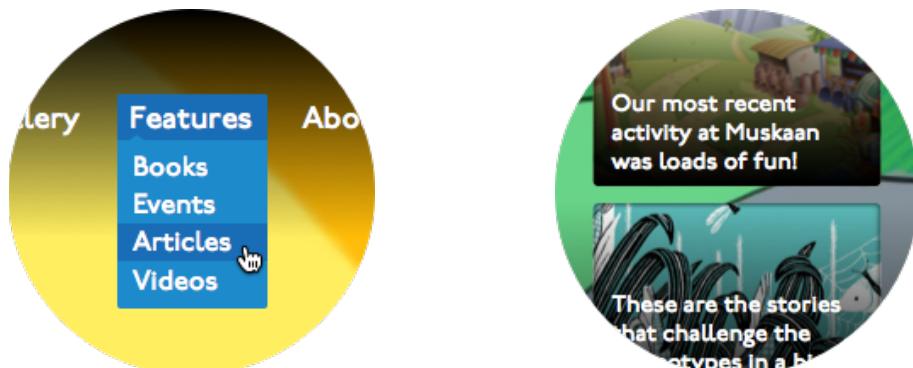

## Re-design Proposal

### Design Overview

- The mockup here has chosen a hill road reaching towards the horizon, depicting life being a journey to be followed.
- The colours chosen here conform to an early morning, again depicting the prime purpose of the website.
- The backdrop is not a single picture, but rather a combination of multiple layers. The plan here is to keep the website responsive on all the devices, as well as introduce a parallax effect.
- The widgets are proposed to replace the old links present on current website.

Draft Mockup of the Webpage on a Desktop

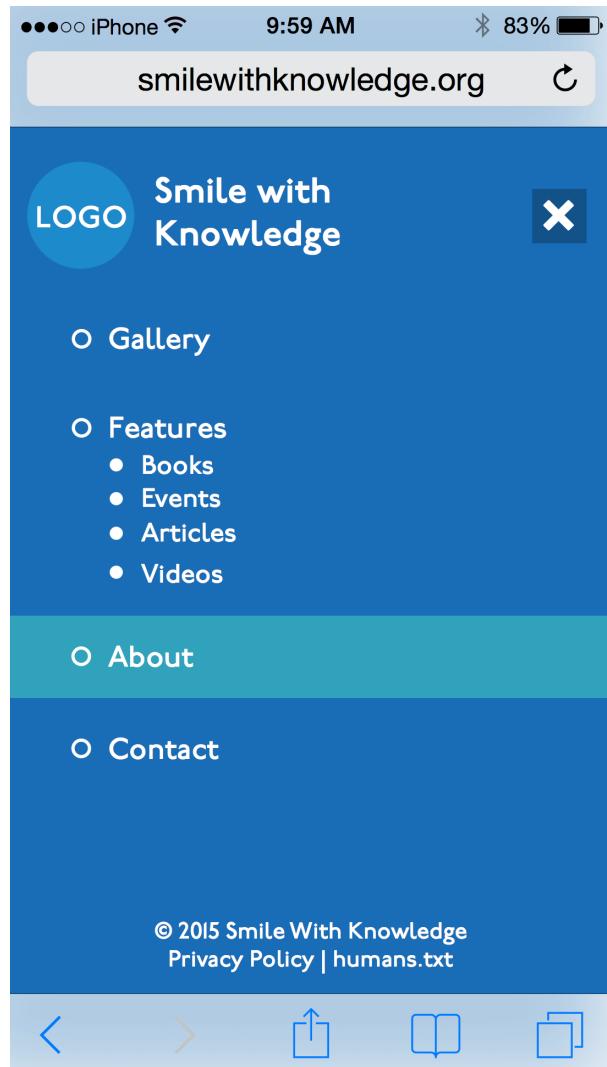

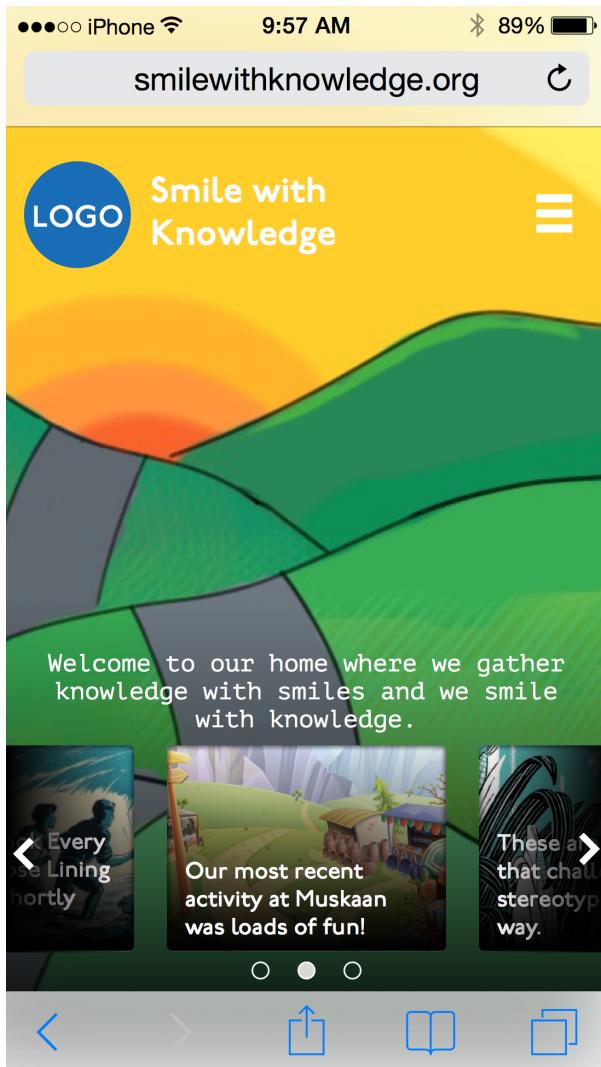

The Menu and Widget Elements

## Re-design Proposal

### Responsive elements

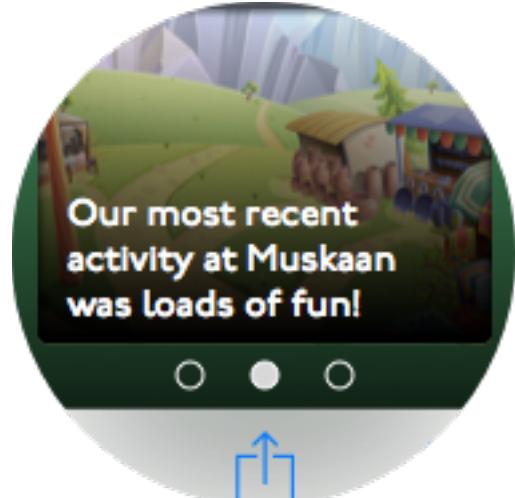

- The backdrop is layered with anchor points that are hinged to the centre of the viewport - this makes sure that the “sun”, “roads” and “hills” stay inside visible area on any web browser.
- The Menu bar contracts into a full screen menu on mobile device.
- The widgets turn into a slidable bar on mobile devices.

Top Left: Mock screenshot of the Webpage on a mobile device

Top Right: The navigation menu

Right: Widget Links

## Re-design Proposal

### Proposal limitations and Area of Improvement

- This proposal uses very rough elements to preview the final design. Preferably, the client should suggest the changes built upon this initial draft.
- The backdrop could also be responsive to the user's devices' system time, changing the background sun to moon and similar transformation.
